

ENTERPRISE SVPN™

For many IT organizations, the cost, resources, and time required to deploy and maintain secure private information networks have become prohibitive. You need to manage the expense and technical infrastructure for remote-access users, add new users, support branch offices, and obtain 24x7 availability and security. That's why leading global organizations are turning to Xapiens' ENTERPRISE SVPN™ for highly secure virtual private networking solutions that leverage IP networks to create fast, efficient, and highly secure network connections.

With ENTERPRISE SVPN™ you can provide your users with inexpensive, dynamically configurable, ubiquitous network access through a single IP infrastructure. ENTERPRISE SVPN™ incorporates market leading security software from Cisco, Check Point Software Technologies, scalable Nokia® IP Security Platforms, Netscreen, and several others, Xapiens' proactive 24x7 monitoring, expert management, complete hardware and software maintenance, and security incident response, policies and procedures. ENTERPRISE SVPN™ is ideal for organizations that want to deploy:

- **Robust Remote Access.** ENTERPRISE SVPN™ provides a high level of end-to-end security through IPsec-encrypted tunnels and digital-certificate, RADIUS, or Secure-ID-based user authentication. Connection charges are far lower, since users can usually access the network from a local call. And business-class modem management from Xapiens means no modem banks to buy and maintain.
- **Secure Intranets.** You can increase the security and accessibility of your corporate applications and communications from both remote users and branch offices.
- **Flexible B2B Extranets.** You can extend your network easily and more securely to business partners, suppliers, and customers. Adding and removing users is fast and simple.
- **An Attractive Alternative to Frame Relay.** ENTERPRISE SVPN™ is more flexible, easier to adopt and maintain, more secure, and less expensive than frame relay architectures.

ENTERPRISE SVPN™ incorporates the industry's best implementation of IPsec, including device and user authentication through x.509 digital certificates, Triple DES encryption, IPsec tunneling, IKE key management, and Entrust 4.0 PKI support. Xapiens is the only managed security service provider that is also a Certificate Authority, simplifying your VPN implementation. And Xapiens' unmatched expertise in network security, including 24x7 monitoring, management, and response from our Network Operations Center, provides one of the most comprehensive VPN services available.

Xapiens is committed to customer satisfaction. Our SLA for all our Managed Security Services stipulates a mean response time of 30 minutes for security incidents (as usual in the industry, there are some restrictions depending on the nature of the event). Firewall policy changes are guaranteed within 24 hours of customer requests. Xapiens offers Managed Security Services customers the option of field services with guaranteed delivery within four hours. If we fail to meet an SLA on a particular day, the customer isn't required to pay for services that day, twice in a month and the service is on us for the entire month. **Be secure!**

ENTERPRISE SVPN™ is the virtual private network (VPN) service that lets your branch offices or business partners communicate securely over a private IP backbone, or over the Internet to headquarters or central offices. ENTERPRISE SVPN™ provides cost effective, enterprise-class secure communication solution for organizations with multiple remote offices and locations. With Xapiens ENTERPRISE SVPN™, your remote offices, customers, suppliers, and business partners can send and receive information securely—without installation, maintenance, monitoring, or management worries.

Xapiens is the leading managed security provider in Puerto Rico. Building on our network security experience, we partner with leading applications and integration services companies to deliver a fully integrated suite of managed eBusiness solutions that meet customer needs for managed security services.
